

Safety Procedure - Mechanical Maintenance Work

WORKFLOW AI DEMONSTRATION DATA • DUMMY DOCUMENT

1. Scope

This procedure applies to routine and corrective mechanical maintenance activities involving rotating equipment, pumps, compressors, and associated systems.

2. Required Controls

Obtain the appropriate work permit before starting controlled maintenance activities.

Identify all energy sources including electrical, hydraulic, pneumatic, thermal, and mechanical energy.

Apply lockout/tagout where applicable.

Confirm isolation and zero-energy condition.

Use suitable lifting equipment and inspect lifting accessories before use.

3. Emergency Requirements

Stop work immediately if an uncontrolled energy source is identified.

Notify the area supervisor and control room.

For personnel injury, initiate the site emergency response procedure.

Do not resume work until the area is declared safe.

4. Responsibilities

The maintenance supervisor is responsible for ensuring the procedure is followed. Workers are responsible for complying with the permit, isolation, PPE, and equipment-specific requirements.
